Ex-parte Quayle Action

Claims 1-16 are allowed. Prior art of record does not teach nor suggest presently claimed process. Closest reference is Kunen ET al. (WO 2005/070951). The reference teaches a process of making the exemestane compounds of formula (I) as in claim 1. However, the priority date is same as present application.

Kunen teaches a process of making exemestane. The reference teaches the use of deprotonating agent which includes amines and trialkylamines. See the entire document especially [0020], [0031], [0072] and examples.

The reference teaches reacting the compound (II) with a deprotonating agent and a compound of formula R₅SO₂X which includes methane sulfonyl chloride (MsCl) [0020] to obtain the compound of formula (III) which is then reacted with a base to form an aromatase inhibitor of formula (I) [0009] or (III) is reacted with a base solvent. Another approach is describe in [0010] on page 4 where the base may be an alkali metal solvent.

The reference discloses trimethylamine

Art Unit: 1628

The reference also discloses an intermediate of formula (IV).

Response to Remarks

Applicant's response filed on 09/30/11 is hereby acknowledged. Applicant's arguments are found persuasive therefore obviousness rejection is withdrawn.

Applicants have elected group I (claims 1-16) without traverse drawn to process of making exemestane are allowed. Claims 17-21 are withdrawn from consideration as non-elected invention.
